

Are You Ready for the Benefits of Video?

Prepare for Success with the Experts from Connection

Video has revolutionized the way we communicate, collaborate, and share information—enabling real-time, face-to-face meetings anywhere in the world. Is your organization ready to take advantage of the cost-saving, productivity-boosting benefits of video? The experts at Connection can help you analyze your environment and determine if your network is capable of supporting the traffic and Quality of Service (QoS) needed for seamless video collaboration.

Start with an Assessment

Our Video Assessment (VA) service identifies potential problem areas in your network, and it includes recommendations to ensure your IT dollars produce maximum ROI while delivering high levels of performance.

How the Assessment Works

The Video Assessment analyzes your video system to verify that a video solution implementation meets the design specifications and best practices. These services cover one of the following end user's video system:

- TelePresence
- Video Collaboration
- Digital Signage

Summary of Recommendations

To help you understand the bigger picture, we provide a Video Infrastructure Level Assessment, which is a report that includes:

- Hardware and Software Compliance determines an end user's hardware platform such as software releases for consistency and compliance with the required level to support video applications
- QoS Compliance analyzes an end user's enterprise QoS strategy for video, voice, and end user business applications
- Performance Compliance looks at the end user's network resource utilization such as CPU, memory, and bandwidth to assess for any gaps and determine if there are enough resources for video application deployment
- Lastly, our experts examine the end user's network design, network infrastructure services, hardware resiliency, power, and environment
