

Huntress + Microsoft: Better Together

Full-fidelity Microsoft Security, operationalized for lean teams

24/7 SOC-grade protection with Microsoft

Huntress is purpose built to unlock the full value of the Microsoft stack for under resourced teams. Using the Huntress Agentic Security Platform together with Microsoft Security gets you defense in depth tailored to growing organizations. We don't just integrate with Microsoft's powerhouse tools, we operationalize them directly from a single dashboard. No more juggling third party tools that don't talk to each other or guessing whether "no alerts" means "no threats" or just "no visibility."

As a strategic Microsoft partner and Microsoft Intelligent Security Association (MISA) member, we combine Microsoft's scale with our independent telemetry and expert 24/7 SOC to remediate the hardest-hitting attacker tradecraft.

Key Outcomes

Endpoint Integrity

We deliver hardened configurations and defense in depth by pairing Microsoft Defender with Huntress Managed EDR. Our platform ensures rapid threat containment and expert remediation to stop attacks and keep your business running.

Identity Resilience

Secure your perimeter with continuous monitoring of Microsoft 365 and Entra ID. We watch every Entra sign-in to stop account takeovers, session hijacking, and malicious OAuth apps in their tracks, neutralizing identity-based attacks before they can do damage.

Operational Readiness

Empower lean teams with threat hunting and compliance support. We provide the tools and human expertise you need to respond confidently and consistently—giving you the outcomes of an elite SOC without the overhead of building your own.

How Huntress Integrates with Microsoft Security

Microsoft Defender + Huntress Managed EDR

Huntress turns Microsoft Defender into a fully managed endpoint defense by operationalizing its massive scale for under resourced teams. We centrally manage configurations and health while layering in proprietary telemetry to catch elite tradecraft like persistence and lateral movement. Backed by our 24/7 AI-Centric SOC, we go beyond alerts to provide direct remediation on your endpoints. You get fast MTTR, low false positives, and the peace of mind that your Defender investment is always working at its peak.

Microsoft 365 + Huntress Managed ITDR and Managed ISPM

Stop identity-based attacks and harden your environment to improve your security posture. Huntress Managed ISPM closes the Microsoft 365 gaps and policy drift attackers rely on before they can be exploited. Huntress Managed ITDR monitors Entra identities for threats like business email compromise, session hijacking, and rogue OAuth apps. Backed by our 24/7 AI-Centric SOC, Huntress investigates, isolates identities, helps contain attacks before they escalate, and delivers clear remediation guidance for your team.

Operational Efficiency, Compliance, and Educated Employees

Bridge visibility gaps by ingesting signals from Azure, Purview, and Microsoft 365 into Huntress Managed SIEM. Our SOC filters the noise to pinpoint early-stage threats like brute-force attempts while providing compliance-ready logging without the overhead. To strengthen your human defense, Huntress Managed SAT integrates with Microsoft Teams and Outlook to deliver training and simulations based on real-world threat intel. Together, the Huntress Agentic Security Platform keeps your entire Microsoft environment and its users one step ahead of hackers.

Satisfaction

“

We've been able to contain and respond to 100% of BEC incidents since moving to Huntress ITDR almost 2 years ago. This success is possible with the quick response time and disable account remediations.

Chris Wilson | CTO | RIT

Huntress has saved clients multiple times from potential threats that traditional AV did not pick up. Working along with Microsoft Defender in a centralized portal not only saves clients money but strengthens frontline virus protection. Remediation has been very simple and easy to use.

Austin Sgro, Client CIO, PCS
