

Verification Opinion PC Connection, Inc. CY2025 GHG Inventory

Background

Cameron-Cole, LLC (Cameron-Cole) was retained by PC Connection, Inc. (Connection) to perform an independent verification of its Greenhouse Gas (GHG) Emissions Inventory (GHG Statement) for Calendar Year (CY) 2025. The Scope 1 and 2 GHG Inventory was developed according to the World Resources Institute (WRI)/World Business Council for Sustainable Development (WBCSD) Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard (2004 revised edition) along with its associated amendments. Our opinion on the results of the inventory, with respect to the verification objectives and criteria, is provided in this statement.

Responsibility of Connection & Independence of Verification Provider

Connection has sole responsibility for the content of its GHG Statement. Cameron-Cole accepts no responsibility for any changes that may have occurred to the GHG emissions results since they were submitted to us for review. Based on internationally accepted norms for impartiality, we believe our review represents an independent assessment of Connection's CY2025 GHG Emissions Inventory. Finally, the opinion expressed in this verification statement should not be relied upon as the basis for any financial or investment decisions.

Level of Assurance

The level of assurance is used to determine the depth of detail that a Verification Body designs into the Verification Plan to determine if there are material errors, omissions, or misstatements in a company's GHG assertions. Two levels of assurance are generally recognized—reasonable and limited. Reasonable Assurance generates the highest level of confidence that an emissions report is materially correct (with the exception of Absolute Assurance which is generally impractical for companies to achieve). Limited Assurance provides less confidence and involves a less-detailed examination of GHG data and supporting documentation. Limited Assurance statements assert that there is no evidence that an emissions report is not materially correct. Cameron-Cole's verification of Connection's GHG Emissions or Inventory for CY2025 was constructed to provide a Limited Level of Assurance.

Objectives

The primary objectives of this verification assignment were as follows:

- Verify whether Connection's 2025 GHG Emissions Inventory meets the generally accepted GHG emissions accounting principles of accuracy, completeness, transparency, relevance, and consistency;
- Determine if Connection has reported all emissions in conformance with the WRI/WBCSD GHG Protocol; and
- Determine whether or not Connection's 2025 GHG Emissions Inventory meets/exceeds the 95 percent threshold for accuracy.

Verification Criteria

Cameron-Cole conducted verification activities in alignment with the principles of ISO-14064-3:2019(E) Specification with guidance for the verification and validation of greenhouse gas statements. The Connection's GHG statement was prepared to, and verified against, the WRI/WBCSD GHG Protocol.

Verification Scope & GHG Statement

The scope of the verification covers Connection's CY2025 GHG Emissions Inventory with the following boundaries:

- **Geographical:** US
- **Chemical:** carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), hydrofluorocarbons (HFCs) perfluorocarbons (PFCs), sulfur hexafluoride (SF₆) and nitrogen trifluoride (NF₃)
- **Reporting Period:** January 1, 2025 to December 31, 2025
- **Organizational Boundary:** Operations for Connection include nine offices and a small fleet.
- **Operational Boundary:** The following sources/emissions were identified in Connection's organizational boundary:
 - **Scope 1**
 - Direct emissions from stationary combustion sources: natural gas
 - Direct emissions from mobile combustion sources: mobile fuel
 - Direct fugitive emissions: refrigerant

■ Scope 2

- Indirect emissions from purchased electricity
- Review of renewable energy certificates

for the period of January 1, 2025 to December 31, 2025, Connection reported the GHG emissions listed in Table below.

GHG Emissions Category	MT CO ₂ e
Total Scope 1 Emissions:	1,299
Total Location-Based Scope 2 Emissions:	1,936
Total Market-Based Scope 2 Emissions:	1,518
Total Entity-Wide Emissions (Location-Based)	3,235
Total Entity-Wide Emissions (Market-Based)	2,818

Verification Opinion

Based on the method employed and the results of our verification activities, Cameron-Cole has found no evidence of material errors, omissions, or misstatements in Connection's CY2025 GHG Statement. Cameron-Cole also found that Connection's GHG accounting and calculation methodologies, processes, and systems for this inventory conform to the WRI/WBCSD GHG Protocol.
