CONNECTION MICROSOFT DATA SECURITY WORKSHOP

With the rapid growth of business-critical data and generative AI, it's vital to have an integrated strategy that quickly identifies, triages, and mitigates data security risks.

Identifying and mitigating data security risks is crucial for maintaining trust, ensuring a secure workplace, and safeguarding company assets and privacy. Our Data Security Engagement provides actionable insights into data security, privacy, and compliance risks.

What to Expect

By the end of this engagement, you will receive:

- Data Security Risk Report that includes findings and insights from our discovery process.
- Compliance Manager Tenant Assessment report with actionable suggestions and key improvement actions.
- Strategic Recommendations to support your key initiatives that will identify risks and provide actionable next steps to mitigate them.

PLAN

- Solution demonstration
- Review scope
- Plan for roles and permissions
- Plan for data sources
- Agree on project plan

ENABLE AND CONFIGURE

- Enable discovery tool and configure the search artifacts
- Two weeks of discovery searching for data security risks and risky user behavior
- Includes Microsoft 365 Exchange, Teams, and SharePoint
- Optional: On-premises data and Windows 10/11 endpoints

ANALYZE

- Analyze the findings and report on the identified data security risks
- Collect reports, logs, and dashboard information
- Analyze findings, map to solutions, and provide recommendations

OUTCOMES

1. Structured and categorized overview of risks
2. Recommendations for risk mitigation
3. Prioritized list of next steps
4. Implement solutions to control and mitigate data security risks
5. Improved compliance posture
