

Video Surveillance and Access Control Installation Services

VS/ACS: A Turnkey Approach

Connection partners with leading video surveillance and access control systems OEMs and proven technology services integrators to provide an end-to-end “turnkey” services approach for the design, deployment, and integration of Connection’s leading VS/ACS solutions—all starting with an on-site survey.

Industry Vertical and Use Case Highlights:

Retail: Theft and shrink reduction, fraud and incident investigation, and store operations and merchandising

Healthcare: Patient, staff, and visitor safety; controlled access to sensitive areas; and incident response and de-escalation

Education: Campus safety and threat response, emergency management, and visitor and contractor management

Manufacturing and Industrial: Perimeter and facility security, safety, and incident review; controlled area access

Why Connection?

Connection offers products, technical expertise, services, and solutions to help your business adapt to the ever-changing technology landscape. Connection designs and deploys infrastructure solutions tailored to each customer’s unique business needs, enabling them to optimize spend while enhancing agility.

Modern video surveillance and access control systems (VS/ACS) provide easily managed physical security and awareness in a cloud-managed, highly integrated, all-in-one solution that fuses advanced hardware with intelligent software and AI/ML data analytics. Managed through a single pane of glass, these systems deliver safety and security, ease of use, operational efficiency, and business insights. Connection’s leading vendors’ solutions are based on comprehensive portfolios that seamlessly integrate cameras, access controls, alarms, environmental monitors and sensors—and more.

Benefits of Modern Video Surveillance and Access Control Systems

Connection can help your organization adopt and integrate a modern VS/ACS system with solutions from leading partners such as Verkada, Rhombus, Axis, and Meraki. Each has a product portfolio that goes far beyond security cameras and access control, with vertical-aligned use cases that focus on health and safety, environmental controls, customer analytics, and simplified ownership. Benefits include:

- **Enhanced Safety, Security, and Loss Prevention:** Modern systems provide high-resolution video, wide coverage, image and facial recognition, and advanced analytics to detect unauthorized access, theft, suspicious behavior, and persons of interest—helping to prevent incidents before they escalate.
- **Real-time Monitoring and Alerts:** Users receive instant notifications for predefined events (motion detection, door forced/held open, tailgating, unsafe environmental conditions), enabling faster response times and proactive intervention.
- **Intelligent Analytics and AI Features:** Built-in analytics with event correlation and federated high-speed text-based search offer deeper insights and reduce manual, labor-intensive monitoring. These features help automate threat detection and generate actionable intelligence—as well as advanced reporting capabilities.
- **Centralized Cloud-based Management:** Cloud-native platforms allow users to manage cameras and access control from anywhere via a single interface—eliminating the need for on-site servers and storage and simplifying remote operations; a “cloud-to-ground” hybrid approach leveraging edge/IoT intelligence.

Connection’s Video Surveillance and Access Control System Services

- Connection’s VS/ACS services integrators perform both the design and implementation of leading cloud-managed systems from **Verkada, Rhombus, Axis, and Meraki**. They begin with an on-site survey—a critical first step—and then create a comprehensive design customized to your unique requirements. This unified, end-to-end services approach includes implementation of video surveillance and access control systems, detailed camera placement and mounting, low-voltage cabling, and integration with existing legacy card readers and access control applications. **Connection is a Verkada Diamond Partner.**
- Connection’s services integrators deliver a unified systems deployment, which can include indoor/outdoor cameras, door controllers, locks and sensors, badge readers, intercoms, keypads and panic buttons, and environmental sensors.
