

N-able N-central

United IT management

The N-able™ N-central® platform helps IT departments conquer IT complexity, increase productivity, and safeguard their IT environment.

These days, your end users utilize multiple devices, BYOD, or a mix of the two. That means your time and resource-strapped IT department is likely busier than ever. You have to monitor and manage those devices, as well as an increasingly complex network, end user tickets, and endpoint security.

N-able N-central software helps you bring complex networks and processes under control. Discover, manage, monitor, and fortify your entire network—all from one web-based console.

On top of that, you can increase technician efficiency through easy-to-implement automation. For example, you can preconfigure or update devices in bulk (even across multiple locations) using profiles, rules, and filters. N-central supports all types of devices—workstations, virtual machines, servers, routers, switches, smartphones, tablets, printers, and IoT devices—and is available hosted or on-premises based on your needs.

Key benefits

- Boost efficiency with sophisticated automation tools
- Increase visibility and control with critical information in a single console
- Enhance data and threat protection
- Resolve issues faster with information at your fingertips
- Improve uptime with proactive alerts and self-healing capabilities
- Automate your daily operations and focus on higher-priority projects

N-central and What Is Included

N-able™ N-central® is ideal for large networks looking to scale IT operations. It provides unmatched customizations, automation, and integration to help your IT departments manage and secure your business.

INCLUDED Functionality that comes with base licensing	Patch management	Windows®, Mac®, Linux®, and third-party applications
