

Veeam Data Platform Implementation Services

What is Veeam Data Platform?

Veeam Data Platform is an end-to-end data recovery platform designed to provide immutable, high-performance backups and direct-to-object storage at any scale. It optimizes moving or copying backups between different storage types, preserving data reduction with intelligent backup data migration. **Veeam Data Platform Premium** includes the following Veeam products: **Veeam Backup and Replication**, **Veeam ONE**, and **Veeam Recovery Orchestrator**.

Deep Integrations with Security/IT Tools:

Veeam v13 offers industry-leading integrations with products like CrowdStrike, Splunk, Palo Alto Networks, ServiceNow, and Microsoft Sentinel, enabling unified detection, investigation, and efficient incident response workflows.

Modernized, Simplified Management:

The modern Web console and appliance-based deployment (Veeam Software Appliance and Infrastructure Appliance) simplify management, reduce setup complexity, and eliminate traditional OS / licensing overhead in Veeam v13.

Why Connection?

We offer products, technical expertise, services, and solutions to help your business adapt to the ever-changing technology landscape. Connection designs and deploys infrastructure solutions tailored to each customer's unique business needs, enabling them to optimize spend while enhancing agility.

Today's datacenters demand simplified management, efficient resource utilization, streamlined virtual infrastructure operations—and a powerful data protection suite to ensure that on-premises and cloud-based workloads are not only protected but are also easily restored. Veeam Data Platform v13 combines security, intelligence, simplicity, flexibility, and performance into a unified data protection solution that is designed to help organizations defend against modern data security threats, recover faster, minimize complexity, and support hybrid cloud and multi-platform environments.

Customer Benefits of Veeam Data Platform v13

Implementing Veeam Data Platform v13 successfully—especially in an environment with multiple hypervisors and applications such as VMware, Hyper-V, Red Hat, SQL Server, and Microsoft 365—depends on the expertise of skilled professional services. These services help ensure optimal performance, reliability, security, observability, and operational readiness beyond the product installation. Our Veeam specialists provide expert guidance at every phase—from initial planning and design to deployment and optimization—enabling your organization to quickly realize the full potential of Veeam Data Platform. Some of the most notable benefits include:

- **Stronger Cyber Resilience and Threat Detection:** Veeam v13 Premium integrates Recon Scanner 3.0 directly into the platform, providing built-in threat visibility, detection of suspicious activity, and forensic insights, helping organizations identify compromise indicators early and reduce risk during recovery.
- **AI-driven Malware Analysis:** An AI-powered malware analysis agent automatically detects, classifies, and reports malware or suspicious behavior, giving actionable guidance to ensure backups are clean and safe before recovery.
- **Immutable Backups by Default:** Backups are immutable by default, protecting recovery points from unauthorized modifications and helping prevent ransomware or insider tampering from corrupting critical data.
- **Expanded Hypervisor and Workload Support:** The v13 platform supports a broader set of hypervisors, OSs and applications (such as Scale Computing HC3, HPE VM Essentials, Red Hat, Oracle, SAP HANA, AIX, and many more), helping organizations protect heterogeneous environments without being locked into a single stack.

Connection Veeam Data Platform Professional Services

- **Veeam Data Platform Implementation Services:** Our certified Veeam engineers can install and configure Veeam products and feature sets such as Veeam Backup and Replication, Veeam ONE, Recovery Orchestrator, and Azure or Microsoft 365 Backup—as well as key cyber resilience security features such as Malware Scanning, Threat Center/Threat Hunter, and YARA Content Analysis.
- **Backup Repository Implementation and Integration:** Our services team can install and configure Veeam backup repositories on physical appliances (such as Exagrid), midrange storage arrays/filers, Veeam's hardened repository appliance, or to object storage (such as S3-compatible, VDC Vault, Object First, Wasabi, or Azure Blob).
