

A Practical Approach to AI Adoption

Across industries, organizations are asking the same practical questions:

- Where should we start?
- Which use cases will create measurable business value?
- How do we avoid large upfront investments?
- How do we prove success before we scale?

Many organizations already have AI initiatives but struggle to move beyond pilots and isolated experimentation. AI-in-a-Box provides a structured Jumpstart methodology that enables teams to deploy a working solution, validate outcomes, and make future investments based on proven results instead of assumptions.

Start Small. Prove Value. Scale with Confidence.

Organizations don't need to solve AI at enterprise scale on day one. They need a practical way to identify high-value opportunities, validate business outcomes, and build a foundation that can grow over time.

AI-in-a-Box combines pre-built vertical use cases, guided deployment through CNXN Helix Jumpstart Services, and scalable infrastructure to help organizations move from idea to execution with confidence.

WHY ORGANIZATIONS GET STUCK

- Too many possible use cases
- Unclear business priorities
- Infrastructure complexity
- Security and governance concerns
- Pilots that never reach production

THE AI-IN-A-BOX APPROACH

- Start with one focused business challenge
- Deploy a working AI solution in days
- Validate performance using real data
- Build stakeholder confidence
- Scale based on measurable outcomes

Example Vertical AI Jumpstart Use Cases

 Manufacturing	 Healthcare
Quality inspection	Clinical documentation
Predictive maintenance	Patient scheduling
SOP and knowledge assistants	Revenue cycle support
 Retail	 Education
Inventory optimization	Student success insights
Loss prevention	Knowledge assistants
Store operations	Administrative automation

Why Connection?

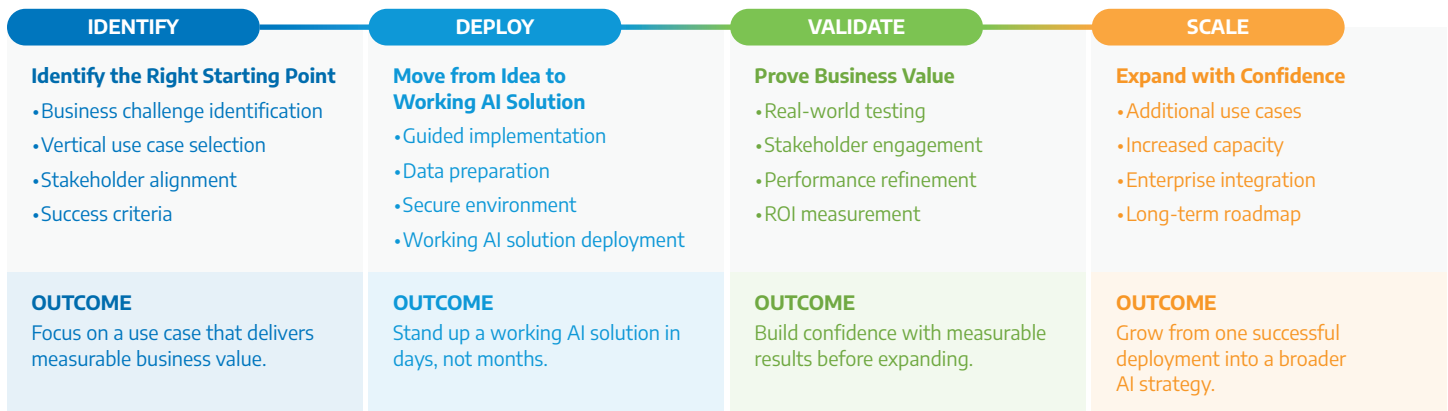

Turn AI Strategy into Business Outcomes

Organizations need more than technology. They need a partner that understands business challenges, accelerates deployment, and provides a practical path from first use case to enterprise adoption.

- CNXN Helix[™] Center for Applied AI and Robotics
- Pre-built vertical AI Jumpstart use cases
- Guided implementation methodology
- Simplified deployment architecture
- End-to-end guidance from planning through expansion

A Practical Path to AI Outcomes

Our Jumpstart Services help organizations move from a single business challenge to a scalable AI strategy through a structured, outcome-focused approach.

From First Use Case to Long-term Transformation

AI-in-a-Box is designed to help organizations move beyond experimentation and establish a repeatable model for delivering AI-driven business outcomes. By starting with a focused business challenge, validating results, and expanding based on proven outcomes, organizations can build a practical path toward enterprise-scale AI success.

Talk to your Connection Account Team to learn how CNXN Helix AI-in-a-Box with Jumpstart Services can help turn focused business challenges into measurable AI outcomes.
