

Making it easier for providers to connect with patients

Technology managers in the healthcare sector are looking for ways to provide flexibility and security while still adhering to HIPAA regulations.

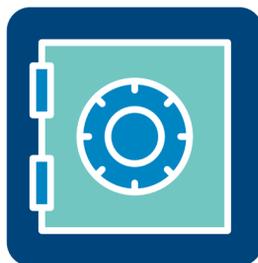

Challenges

90% of hospitals and clinics lose patient data every year.

The medical industry faces **more** data breaches than the military and banking sectors **combined**.

By 2020, storage capacity for medical images could reach as much as...

2.3 zettabytes.

A single MRI file can require as much as **5GB** of storage.

According to 3,000 doctors...

62% used digital devices for professional purposes.

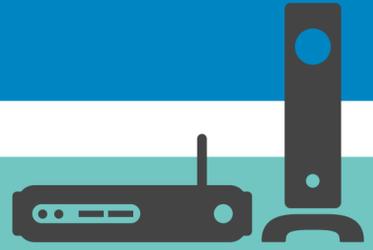

50% of physicians who own tablets have used one at the point-of-care.

Data examples based on US market research

Solution

VDI and Dell Wyse thin clients powered by AMD enable...

Ultimate security

Centralized data for increased security, single password sign-on, security built for every user.

Any device access

Easy access anywhere in your facility, securely roam between devices, mobile workstations.

Greater reliability

Maximize IT efficiency with central management, Dell equipment optimization tests, longer refresh cycle.

Benefits

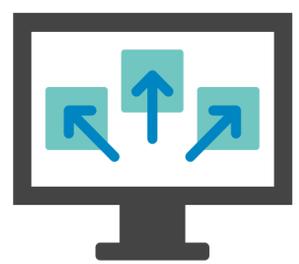

Protected patient data

Locked down, virus-immune endpoints greatly limits patient information exposure to breaches.

More time with patients

Non-stop session roaming provides mobile access giving clinicians more time with patients.

More productive IT

Desktop management automation, streamlined deployment, dependable, energy-efficient hardware.
