

Harmonize Your Virtualized Infrastructure

Get in Tune with a VMware vSphere Health Check

You've made a significant investment to virtualize your computing environment using VMware vSphere, the industry-leading virtualization platform. Now let the experts help you make the most of it. Connection's VMware Certified Professional (VCP) consultants can work with your team to provide best-practice guidance for utilizing and optimizing VMware vSphere.

VMware vSphere Health Check Benefits

- Analyzes your current VMware vSphere configuration
- Mitigates potential risks by providing best practice recommendations
- Provides a roadmap of future improvements that can be made to maximize your resources and improve efficiencies

What Our Expert Consultants Provide

- Analysis of your virtual environment and validation of VMware best practices
- Best practices workshop to transfer knowledge on how to use the vSphere environment
- Identification of any vSphere component that does not conform to VMware best practices
- Guidance to remediate the non-conforming components
- Detailed report illustrating issues and remediation steps

Requirements

- Existing VMware vSphere environment
- A service account or System Administrator who has administrative access to vCenter
- A system running with local administrative rights to launch the assessment tool
